

Kaan Osmanagaoglu

SENIOR ANDROID ENGINEER | KOTLIN + COMPOSE | PAYMENTS + DESIGN

+61 452 009 101 | kaanixir@gmail.com | linkedin.com/in/kaosmn | true-liquid-multiplatform | West Melbourne, VIC 3003

❖ PROFILE

Senior Android/Kotlin engineer with 9+ years across payments, wallets, logistics, banking, government and defence-adjacent systems. I tend to work on apps people depend on: fuel payments, public transport, terminal payments and self-custody wallets. Strongest where architecture, failure modes, release automation, telemetry and polished Compose UI meet; now building Compose Multiplatform design libraries.

❖ HIGHLIGHTED WORK

- Zeller + Quest: EFTPOS, Tap-to-Pay and PayWave terminal architecture across PCI-grade payment products and partner workflows.
- Crypto.com: DeFi Wallet Earn, staking and cross-chain bridge work translating protocol research into self-custody mobile UX.
- Coles: phone-based fuel-pump payments for Coles Express, with maps, geofencing, PayWave and multiple gateways.
- PTV: train animations and high-traffic journey UI for the Public Transport Victoria app, a daily utility for Victorians.

❖ OPEN SOURCE / DESIGN

COMPOSE DESIGN

Released **true-liquid-multiplatform** (2026), a liquid-glass Compose Multiplatform library with desktop window replacement support.

TESTING INFRASTRUCTURE

Added sharding capability to Maestro E2E (PR 1732) and improved testing server architecture in GraphQL Android libraries.

❖ EXPERIENCE

Tip.mi

Senior Mobile Developer (Contract)

Melbourne | 2025-2026

- Built greenfield Android and Compose Desktop MVP surfaces with operational analytics.
- Migrated SwiftUI/iOS surfaces toward shared Kotlin architecture; owned secure signing, staged rollouts and Grafana/Mixpanel telemetry.

Zeller

Senior Mobile Engineer

Melbourne | 2023-2024

- Served as a mobile architect on EFTPOS/payment-terminal products at a major Australian terminal provider competing with Square.
- Delivered Tap-to-Pay with shared Kotlin mobile code and React Native bridge integration; supported PCI certification.
- Modernised terminal architecture from RxJava/MVVM toward Coroutines, MVI and Compose while expanding parallel Maestro E2E coverage.

Quest Payment Systems

Senior Software Engineer

Melbourne | 2023

- Spearheaded Android and management apps across the PoS suite with Westpac, NAB and Officeworks payment workflows.
- Secured Android PayWave/payment certification using Android OS, secure key handling, encryption and compliance knowledge.
- Owned delivery quality across 4+ payment products, including offline transaction flows and release readiness.

Crypto.com

Lead Android Developer

Melbourne | 2022-2023

- Led DeFi Wallet feature work across Earn, staking and self-custody flows for one of the world's largest crypto exchanges.
- Designed frontend/backend architecture with blockchain teams for cross-chain bridge and protocol integrations.
- Reviewed protocol white papers before integration and translated maths-heavy staking and pool logic into mobile UX.

❖ EDUCATION

Bachelor of Science (Information Technology, Networks and Software Engineering), Queensland University of Technology, 2015.

❖ RESEARCH

- Research Assistant (2014): one-time signature trees for post-quantum cryptography.
- Research Assistant (2015): GPS/GNSS positioning accuracy using real-time kinematics.

❖ EXPERIENCE CONTINUED

Coles

Senior Android Developer (Contract)

Melbourne | 2021

- Built phone-based fuel-pump payment flows for Coles Express from the ground up, integrating maps, geofencing, tracking, PayWave and multiple gateways.
- Extended mobile architecture and delivery practices across adjacent Coles products with product, design and platform teams.

❖ EARLIER HIGH-TRUST WORK

PTV / ARQ Group + Suncorp Bank

Public Transport Victoria and private banking mobile systems

2017-2021

Built train position animations and high-traffic journey UI for the Public Transport Victoria app, a daily utility for Victorians, working directly with two designers; delivered Suncorp private-banking Android work across Java/Kotlin, Dagger, Retrofit, MVVM, identity and API teams.

Modanisa + Huawei R&D

International Android platform and e-commerce delivery

2019-2021

Led Android architecture and payment-gateway work for e-commerce; integrated Huawei Mobile Services for European partners and supported HMS API development with Shenzhen R&D.

Grabba + Defence / Praesidium Global

Biometrics, hardware integration and defence robotics

2018-2020

Built biometric identity apps for airports, law enforcement and banking; led Android/tablet control interfaces for unmanned ground vehicles with ROS, Lidar, sensor networking and backend communications alongside electronics/mechanical engineers.

Mobey + RSA (EMC/Dell)

Logistics platform leadership and cryptography engineering

2016-2017

Led Android delivery for an on-demand logistics platform with two launched apps, geofencing and map/vector animation work; then developed RSA BSAFE cryptography components in C/ASM with Python build automation, HSM integration and Android mobile-security PoCs.

❖ ENGINEERING RANGE

ANDROID

Kotlin, Jetpack Compose, Coroutines/Flow, Room, Dagger/Hilt, Retrofit/OkHttp

MULTIPLATFORM

Compose Multiplatform, Kotlin/Swift bridges, React Native interop, Desktop

ARCHITECTURE

Clean Architecture, MVI/MVVM, modularisation, legacy migrations, state-driven UI

PAYMENTS & SECURITY

EFTPOS, Tap-to-Pay, PayWave, PCI, wallets, secure key handling, encryption, offline flows

DELIVERY

Maestro E2E, unit/instrumented tests, CI/CD, Fastlane, GitHub Actions, Jenkins

PLATFORMS

gRPC, REST, GraphQL, WebSockets, Firebase, AWS, Crashlytics, Sentry, Mixpanel, Grafana
